c) Try to handle the bag with care for a longer lifetime.
d) Do not try to hard press the buttons which may lead to malfunctioning later.

TRACUZ
NEVER TRAVEL ALONE

Features

____

Inner Illumination:

There are LEDs placed inside the bag which illuminates in the dark when the zip is opened. It lights up for 15 seconds after which it shuts down.

Deep Sleep:

The deep Sleep functionality allows the user to save power by turning off the other functionalities like sensors, front matrix LEDs and other LEDs.

Predefined Animation:

There are set of 25 predefined animations which can be displayed on the 8*8 LED Matrix display along with addressable LEDs with custom colour. Changing the Predefined animation with the addressable LEDs colour can be done through the app.

Custom Animations:

The custom animation can be set by the user and he/she can any kind of animation and save it in the app. Creating custom animation can be done through the app.

Text Display:

The rolling text can be sent through the mobile app and is displayed on the 8*8 LED Matrix along with addressable LEDs with custom colour.

Secure Mode:

The secure mode is a virtual lock for the bag. In secure mode, the zip state is checked continuously to find any disruption in the previous state and also alerts if someone tries to take the bag and go which is left down. The bag will alert the user if there is a disruption.

Silent Mode:

The silent mode turns the bag to silent mode by turning off all the audio notifications by keeping haptic notifications on.

Ride Mode:

The ride mode turns on the navigation by visual as well as haptic notification. The ride mode is specifically designed for cyclist with turn indicators. In ride mode pollution level will be monitored each and every second and the ride will be alerted with pollution data.

Beacon Tracking:

The Beacon is a small Bluetooth radio transmitter. The beacons can be added to valuable items like wallet, house keys, laptop, tag etc to enable their tracking. The bag will notify the user if there is any missing item.
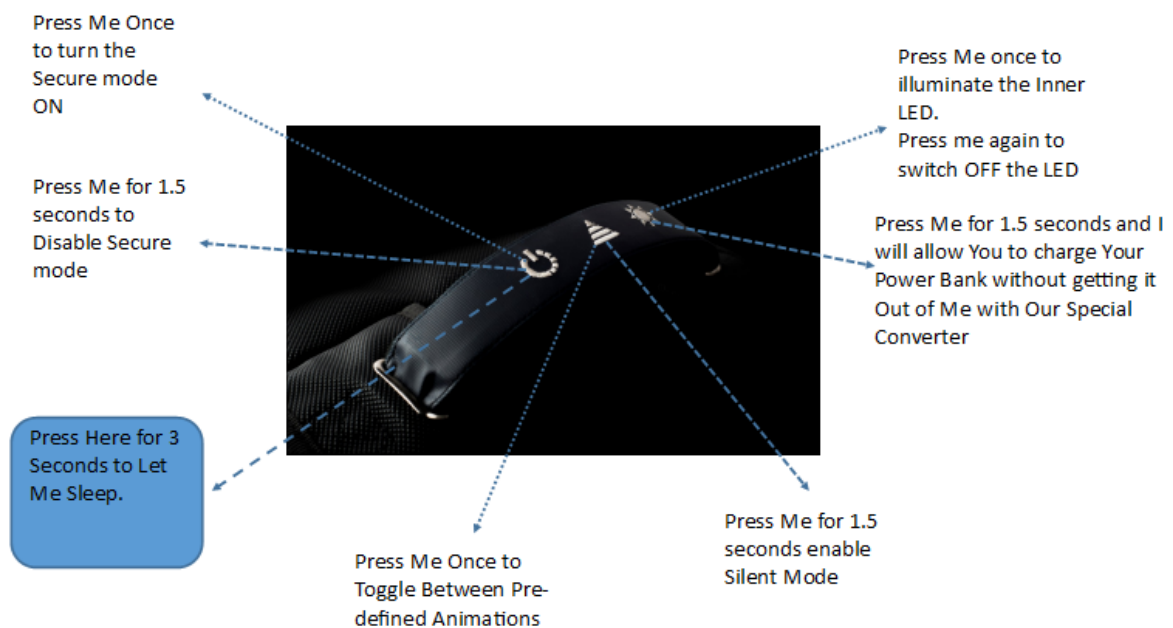

Bluetooth Control:

The functionality of the bag can be operated through the mobile application using Bluetooth connectivity and also bag can be used standalone too.

Pollution level monitoring:

The Pollution sensor data is stored in the bag. It alerts you if the pollution level goes beyond some threshold point.
